Aesha Mohamed Omar

SOC Analyst

Alexandria, Egypt | 01211169908 | aeshamohamedomar@gmail.com

LinkedIn | GitHub | TryHackMe

PROFESSIONAL SUMMARY

Final-year Cybersecurity student and SOC/Incident Response trainee with hands-on experience in SIEM monitoring, log analysis, threat detection, and security investigation using QRadar, Splunk, and the ELK Stack. Experienced with network and security tools including Nmap, Wireshark, Metasploit, and Burp Suite, with practical labs covering incident response, web application security, cloud IAM, phishing simulation, and DoS/DDoS analysis. Seeking an entry-level SOC Analyst role to apply hands-on detection, investigation, and incident response skills in a professional security environment.

EDUCATION

B.Sc. in Cybersecurity — Alexandria University *Oct 2023 – Jul 2027 (expected)*

Faculty of Computers and Data Science

Final-year student · CGPA: 3.49

- Relevant coursework: Computer Networks, Computer & Network Security, Cryptography, Information Security Management, Secure Software Development, Operating Systems & OS Security, Cloud Computing & Security, Distributed Processing, Data Integrity & Authentication, Human Security, Introduction to Cybersecurity, Machine Learning, Web Programming, Software Development.

EXPERIENCE & TRAINING

Cyber Security Incident Response Analyst Trainee — DEPI *Jul 2026 – Nov 2026 (in progress).*

- Completing a structured incident-response curriculum spanning network fundamentals, Windows and Linux OS fundamentals, security and attack techniques, digital forensics, and SIEM/SOC operations and automation.
- Building a capstone incident-response project applying the program's investigation and response methodology end-to-end.

SOC Trainee — AMIT Learning *Jul 2026 – Nov 2026 (in progress).*

- Trained across network fundamentals, Linux administration, CompTIA Security+ domains (threats, identity and access management, incident response, risk management), attack techniques, and SANS SEC450 blue-team methodology.
- Practiced threat detection, log analysis, and threat hunting using QRadar and Splunk as part of the SIEM module; completing a graduation project applying SOC monitoring workflows end-to-end.

SOC Trainee — TechTrek *Jul 2026 – Sep 2026 (in progress)*

- Covered network fundamentals, Linux and Kali Linux, Windows and Active Directory management, Security+ domains, and network security devices such as firewalls, IPS/IDS, and WAF.
- Practiced SOC and SIEM analysis using ELK Stack and Splunk, and incident handling and investigation on Windows and Kali Linux VMs, plus a Cisco Packet Tracer project and TryHackMe rooms on attacks and privilege escalation.

CERTIFICATES & ADDITIONAL TRAINING

CCNA Track — New Horizons *Jul 2024 – October 2024.*

- Completed Introduction to Networks, Switching Routing and Wireless Essentials, and Enterprise Networking, Security and Automation, building the routing/switching and network security foundation used in later SOC training.

Software Development Summer Internship (Angular) *Jul 2025 – Sep 2025*

- College-run internship building front-end applications with Angular, HTML, CSS, and JavaScript.

Python Data Analysis Workshop — Pioneer Academy *Jul 2024 – Oct 2024*

- 110-hour workshop covering Python basics and data science with Python, including data structures such as lists, dictionaries, tuples, sets, and arrays, control flow, functions and recursion, and data visualization using pandas Series and DataFrames.

TECHNICAL SKILLS

Security Tools: Nmap, Metasploit, Kali Linux, Nessus, FOCA, Burp Suite, Eramba, hping3, MailHog, Wireshark

SIEM & Monitoring: IBM QRadar, Splunk, ELK Stack

Cloud (AWS): AWS CLI, IAM, Lambda, Secrets Manager, EC2, Security Groups, S3

Programming: Python, Java, R

Systems & Networking: Windows Active Directory, Linux, TCP/IP networking fundamentals

Practice Platforms: TryHackMe, Let's Defend, PortSwigger Web Security Academy, CYBR, AWS, Cisco Packet Tracer, Hack The Box

Languages: Arabic (Native), English (B2)

PROJECTS

Credential Harvesting & Phishing Simulation *Kali Linux, Metasploit, MailHog*

- Built a site-cloning phishing attack targeting a cloned OWASP Juice Shop login page using Metasploit's social engineering toolkit, capturing harvested credentials to a log file.
- Tracked email open rates and unique visitor IPs with a custom monitoring script.

AWS IAM Security Assessment *CYBR, AWS CLI*

- Generated IAM credential reports via AWS CLI and demonstrated a privilege-escalation path by accessing Secrets Manager through a Lambda function LFI vulnerability.

SMB EternalBlue Exploitation *Kali Linux, Metasploit, Meterpreter*

- Exploited the MS17-010 (EternalBlue) vulnerability against a Windows 7 target to gain a Meterpreter session.
- Deployed a reboot-persistent payload using msfvenom.

DoS/DDoS Attack Simulation & Monitoring *hping3, Apache, Linux*

- Executed and analyzed four denial-of-service attack types (ICMP flood, SYN flood, UDP flood, Slowloris) against test targets.
- Monitored system and network impact in real time via htop, ss, and Apache access/error logs.

Web Application Security Labs *PortSwigger Web Security Academy, Burp Suite*

- Exploited a CORS misconfiguration chained with a subdomain XSS vulnerability to exfiltrate an administrator's API key via a crafted JavaScript payload.
- Performed an OAuth account-hijacking attack by manipulating the redirect_uri parameter to capture a victim's authorization code via a hosted exploit server.
